4/24/2015	SB1500246	4700 WISCONSIN AVE NW	A total of two 6-inch diameter soil test boring will be drilled using 2.25-inch continuous hollow stem flight augers. The boring will extend to a maximum depth of 40 feet below current site grades using a truck-mounted drill rig. The samples will be containerized in glass jars for geotechnical classification and laboratory testing. The boring will be left open for a period of 24 hours to collect groundwater information. A slotted PVC pipe will be inserted into the hole at the completion of drilling. The PVC pipe will be capped to prevent runoff from entering the bore hole. After groundwater reading the borehole will be grouted with bentonite slurry 2 lbs of bentonite to 1 gallon of water and the auger cuttings and all other Investigation Derived Waste IDW will be containerized in sealed drums per DDOE permit. 4/9/2015	SB1500233	1150 5TH ST SE	We will perform a total of two soil borings on the proposed site and one auger probe boring for infiltration testing. One boring will extend to a depth of 100 feet, and the another will extend to a depth of 15 feet below existing site grades, and will be located within the bounds of the private property. We will also drill one probe boring, offset from the 15 foot boring, to a depth of approximately 10 feet below existing site grades for the infiltration testing and will be located within the bounds of the private property. The borings will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The borings will be performed utilizing an ATV-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole. 4/9/2015	SB1500232	2255 MARTIN LUTHER KING JR AVE SE	We will perform three soil borings on the proposed site. The soil borings will each be advanced to a depth of 65 feet below the ground surface. The borings will be located within the bounds of the property. The borings will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The borings will be performed utilizing an ATV and/or Truck-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings/auger probes will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole/auger probe abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole/auger probe. 4/29/2015	BCIV1500062	2878 DEFENSE BLVD SW	No work will be performed to buildings or utilities as part of this project. The total limits of disturbance are less than 5,000 square feet. The purpose of this project is to improve drainage and repave an existing roadway, Defense Blvd. Located on the Joint Base Anacostia-Bolling federal facility. Roadway improvements include milling the existing asphalt surface, removing the existing curb and replacing with new asphalt and curb. The slope of the road is being altered by raising the grade of certain parts of the road to improve cross slope. The existing base aggregate will be left in place undisturbed. Any change of grade will be accomplished by adding stone aggregate on top of existing aggregate. The road will then be repaved. Small areas of disturbance are involved in installation of new curb, addition of curb cuts and modification of ADA ramps.	Building	Construction	Civil Plans	NA	Permit Issued	36.30	PAR 02410003	8	8C		NICK HADIARIS, PE; TIM GABRIEL; WENDY MCCOY	Naval Facilities Engineering Comman	No
4/10/2015	SB1500231	3418 4TH ST SE	Six 2-inch diameter borings will be advanced using direct push technology Geoprobe to groundwater or refusal, whichever occurs first. The recovered soil is contained in 4-foot polyethylene sleeve. Recovered soil will be containerized for off-site disposal. For this investigation and per DDOE, groundwater samples may be collected as grab samples from temporary well points constructed of slotted PVC. Samples will be obtained with a peristaltic pump and submitted to an independent laboratory for analysis.
